

*From the Mountains to the Coast
Floodplain and Stormwater Management in Maryland*

Prince George's County LID Site Tour - October 22, 2008.

MAFSM is proud to offer a tour of Prince George's County's Low Impact Development (LID) Project sites. Over the past decade, Prince George's County has completed many projects that utilize LID technology and has found this technology to be effective in treating stormwater runoff from urbanized areas. Their LID projects range from Bioretention projects such as simple rain barrels to elaborate green highways. The tour offers conference attendees the opportunity to see LID in practice.

Time: 9:00 a.m. - 12:00 p.m.
(Please arrive at 8:45am)
