Risk Communication and Flood Insurance

Kevin G. Wagner Maryland Department of the Environment

MAFSM Spring Conference Rocky Gap Casino and Resort, Flintstone, MD June 19, 2019

- This stuff is complicated!
- How can I really help someone?
- First, let's make sure we understand that we're only talking about <u>flood risk</u>.
- Second, let's try to change the way we communicate with people...
 - Instead of saying a structure is "in" or "out" of the floodplain, maybe use a flood risk profile:
 - High risk (Zones A, AE, AH, AO, VE),
 - Moderate risk (shaded Zone X), or
 - Low risk (Zone X)
 - Instead of saying "100-year" floodplain call it a "regulated floodplain"

Risk Communication

Mandatory purchase requirement

- What are the three L's of real estate?
- My three L's of flood risk communication:
 - Listen to what people are telling you
 - Look at the flood maps, and other information
 - Learn from the experience, and apply it to others!

Risk Communication

- First Rule: Flood insurance is a good thing.
- Second Rule: Flood insurance is a good thing.
- Available to homeowners, business owners and renters in the community.
- Doesn't matter where the structure is located in relation to the mapped floodplain.
- Can purchase from either:
 - The NFIP through a Write Your Own (WYO) company, or
 - A private insurer (may not be regulated by the State).
- NFIP flood insurance rates do not differ from company to company or agent to agent.
 - Building and contents coverage available.
- Most homeowners insurance doesn't cover flood damage.

Flood Insurance

 Flood insurance typically goes into effect 30 days after your purchase.

- Premium is based on several factors:
 - Certain fees and surcharges
 - Year of building construction
 - Building occupancy
 - Number of floors
 - Location of its contents
 - Flood risk (e.g., it's flood zone)
 - Location of the lowest floor in relation to the Base Flood Elevation on the flood map (flood openings will determine)
 - Deductible and amount of building and contents coverage
- A Preferred Risk Policy (PRP) can be purchased for as little as \$325 per year.
- Read the policy. (know what's covered, and what isn't)

Flood Insurance

- FEMA Risk MAP Program
- Maryland Resiliency Partnership
 - Maryland Department of the Environment (MDE)
 - Maryland Emergency Management Agency (MEMA)
 - Department of Natural Resources (DNR)
 - Maryland Environmental Service (MES)
 - Maryland Historical Trust (MHT)
 - Maryland Insurance Administration (MIA)
 - State Highway Administration (SHA), etc.
- Maryland Silver Jackets team
- May 8th Flood Insurance Roundtable, Annapolis
 - MDE, MIA, MEMA and FEMA partnered in the event
 - Real Estate, Banking and Insurance had a seat at the table

What's the State doing?

- Form used to document building and ground elevations, area, etc.
- Uses:
 - Ensure compliance with community floodplain management ordinance;
 - Determine the proper flood insurance premium; and/or
 - Support a request for a Letter of Map Amendment (LOMA) to remove a building from the Special Flood Hazard Area.
- Will likely improve the rate, but not in all cases.
- As-built survey must be completed by a Maryland licensed surveyor.

Elevation Certificate

- Reduce hydrostatic pressure on the walls.
- Engineered and Non-Engineered Flood Openings
 - Additional documentation requirements for engineered openings.
- Critically important for proper flood insurance rating for Post-FIRM structures.

Flood Openings

- About a year ago, "Joe" calls me...
 - His son has a house located on Kent Island (Queen Anne's County)
 - The flood insurance premium is really high –
 over \$6k per year!
 - Looking for a way to reduce the cost

• Home facts:

- Located in floodZone AE (EL 5)
- Pre-FIRM structure (built in 1974)
- Policy rated without an Elevation Certificate (Pre-FIRM rating)

- My advice to "Joe":
 - Hire a MD licensed surveyor, and ask them to complete an Elevation Certificate for you.
 - Submit the completed Elevation Certificate to your insurance agent for re-rating.

Outcome:

- The insurance premium went from over \$6k/year, to under \$2k/year!
- "Joe" and his son are happy.

- Deliver rates that are transparent, easy to understand, and better reflect a property's unique flood risk.
- Rating Characteristics
 - distance to the coast or another water source
 - different types of flood risk
 - the cost to rebuild a home
- FEMA is using data from multiple sources
- Will initially provide credits for three mitigation actions:
 - Installing flood openings per the 44 CFR 60.3 criteria;
 - Elevating onto posts, piles, and piers;
 - Elevating machinery and equipment above the lowest floor.
- New rates for all single-family homes will go into effect nationwide on October 1, 2020.

Risk Rating 2.0

Risk Rating 2.0 Overview

Why Risk Rating 2.0?

FEMÁ is focused on building a culture of preparedness by closing the insurance gap. Recognizing that purchasing flood insurance can be continuing and time-consuming, the National Flood Insurance Program (NFIP) is redesigning its risk rating system to improve the policyholder experience.

Risk Rating 2.0 aims to accomplish this by leveraging industry best practices and current technology to deliver rates are transparent, easy to understand, and better reflect a property's unique flood inst. Through these efforts, EMAt goal is to make flood instance significantly easier for agents to price and sell policies, and in turn, help customers better understand their flood risks and the immortance of flood insurance.

Demand for change has been building for a long time, and Risk Rating 2.0 will be the culmination of a multi-year effort.

What is Changing?

Risk Rating 2.0 will fundamentally change the way FEMA rates a property's flood risk and prices insurance. The current rating methodology has not changed since it was first developed in the 1970s. But since then, technology has evolved and so has FEMA's understanding of flood risk. Currently, FAMA develops rates based predominately on Flood Insurance Rate Map zone and Base Flood Elevation. With Risk Rating 2.0, FEMA is pairing state-of-the-art industry technology with the NFIP's mapping data to establish a new risk informed rating plan. The catastrophe models in combination with the ability to leverage the NFIP's mapping data, provides a better and more comprehensive understanding of risk at both the national and local level.

FEMA is building a new rating engine to help agents easily price and sell policies. It will also allow policyholders to better understand their property's flood risk and how it is reflected in their cost of insurance.

Rating Characteristics

The new risk rating plan will use logical rating characteristics for each property,

- distance to the coast of
- another water source
 different types of flood risk
- the cost to rebuild a home

By reflecting the cost to rebuild, the new rating plan will also aim to deliver more equitable rates for owners of lower-value homes

New rates for all single-family homes will go into effect nationwide on October 1, 2020.

What are the benefits of Risk Rating 2.0?

The NFIP is developing Risk Rating 2.0 to deliver the following key benefits to policyholders, communities, and the flood insurance industry:

Provides rates that are easier to understand for agents and policyholders

Reflects more types of flood risk in rates

Reduces complexity for agents to generate a

Ensures that rates remain risk-based and use the latest actuarial practices

Creates an individualized picture of a property's

Learn More

To learn more about Risk Rating 2.0 and to get the most up-to-date information, please visit www.fema.gov/nfiptransformation.

FEMA's mission is to help people before, during and after disasters.

People can do things
 NOW to protect their
 home from flood damage!

OUTSIDE THE HOME

- Maintain proper water runoff and drainage.
- Improve lot grading.
- Reduce impervious surfaces around your house.
- Install a rain barrel.
- Elevate utilities and service equipment.
- Anchor outdoor fuel tanks.

INSIDE THE HOME

- Protect your valuable possessions.
- Seal your foundation and

- basement walls.
- Install flood vents.
- Install a sump pump.
- Prevent sewer backups.
- Use flood-resistant building materials.
- Raise electrical system components.
- Protect utilities and service equipment.
- Anchor indoor fuel tanks.
- Install a flood alert system.
