Geosyntec Consultants Inc.

Jane Clary –

Wright Water Engineers

Geosyntec^D

Wichita State University

The UMD EFC is one of ten regional centers across the country providing communities with the tools and information necessary to manage change for a healthy environment and an enhanced quality of life. The UMD EFC has worked with communities and watershed organizations on environmental challenges throughout the Mid-Atlantic region for over 25 years. While also partnering with other EFC's on projects across the country, the UMD EFC specifically serves the EPA Region 3 states - Delaware, Maryland, Pennsylvania, Virginia, West Virginia - and the District of Columbia.

Community-enabled Lifecycle Analysis of Stormwater Infrastructure Costs

CLASIC Vision

The CLASIC tool is a user-informed screening tool which utilizes a lifecycle cost framework to support stormwater infrastructure decisions on extent and combinations of green, hybrid greengray and gray infrastructure practices.

Questions the CLASIC Tool Seeks to Answer

- How do various scenarios of stormwater infrastructure compare in terms of:
 - Lifecycle cost
 - Runoff volume reduction
 - Pollutant removal
 - Social benefits
 - Environmental benefits
- How does climate change and land use change effect future performance of scenarios of green and gray infrastructure?
- How do maintenance and long-run costs compare for user selected scenarios?

Community engaged

- 10 EPA Regions
- 30 different municipalities
- User profiles
 - Stormwater treatment and storage
 - Compliance
 - Operations planning and long term maintenance
 - GI policy maker
 - Business/developers

CLASIC v. 0.7.95

Getting Started Getting Started

CLASIC Tool Steps

Vision

Functionality

The icons on the left panel will guide you through the steps of the CLASIC tool (Figure 3). Click on the Select Area icon on the left panel to get started.

Output	Included in CLASIC tool
Pollutant Load	· TSS
Reduction	· TN
	· TP
	· FIB
Hydrologic	· Runoff Volume
	 Volume Infiltrated
	 Volume Evapo-transpired
	 Number of runoff events
LCC	· Present Value
	 Construction
	 Maintenance
	 Rehabilitation
	 Average Annual Cost Over Design Life
	 Per unit cost for scenario comparison
Co-Benefits	· Score of economic, environmental, social
	performance based on user selected importance
	factors and performance output

Web-based Geospatial Tool

- Web-based platform developed at Colorado State University
 - Interface
 - Input Parameters
 - Outputs
- Deployed using the Environmental Resource Assessment and Management System (eRAMS)

Collect Input Parameters & Targets

- Soil Datasets (SSURGO/STATSGO)
 - Soil Type
 - Slope
- Land Use/Land Cover (NLCD)
 - % Open, Low, Medium, High, and Other
 - Water Quality (TSS, TP, TN)
 - Overland Flow Length
- Imperviousness (NLCD)
- Climate
 - Precipitation (NOAA Stormwater Calculator)
 - Evaporation (NOAA Stormwater Calculator)

Technology Categories

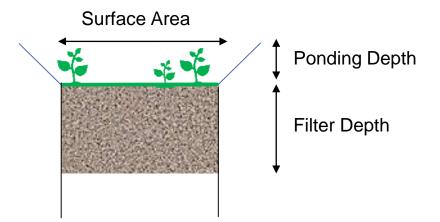

- Rain Gardens
- Sand Filter
- Infiltration Trench
- Permeable Pavement
- Green Roofs
- Disconnection

- Grass Swales
- Extended Detention Basins
- Wet Pond
- Stormwater Harvesting
- Storage Tunnel/Vault

Adding Stormwater Infrastructure

Rain Garden-00	(1 / 1)	Î	^
Rain Garden Class Small		•	•
Surface Area: 100 ft ² Ponding Depth: 3" Media Thickness: 18"			
🔲 Impermeable Li	ner Used		0
🔲 Has Underdrain			8
Vegetation			2
Grass		•	
Maintenance			?
Recommended		-	

A technology unit treats a specific **volume** or **area** that is defined within the CLASIC tool. Technologies may vary in terms of size and design parameters.

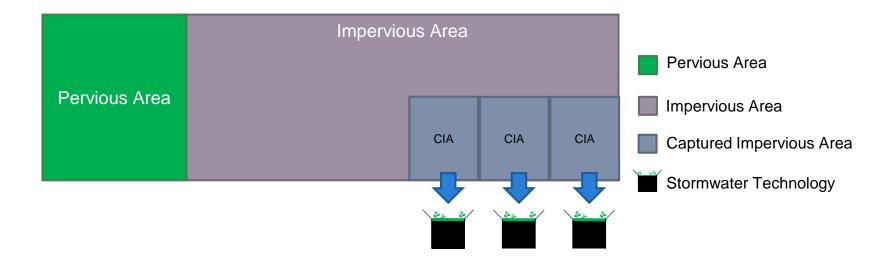

Adding Stormwater Infrastructure

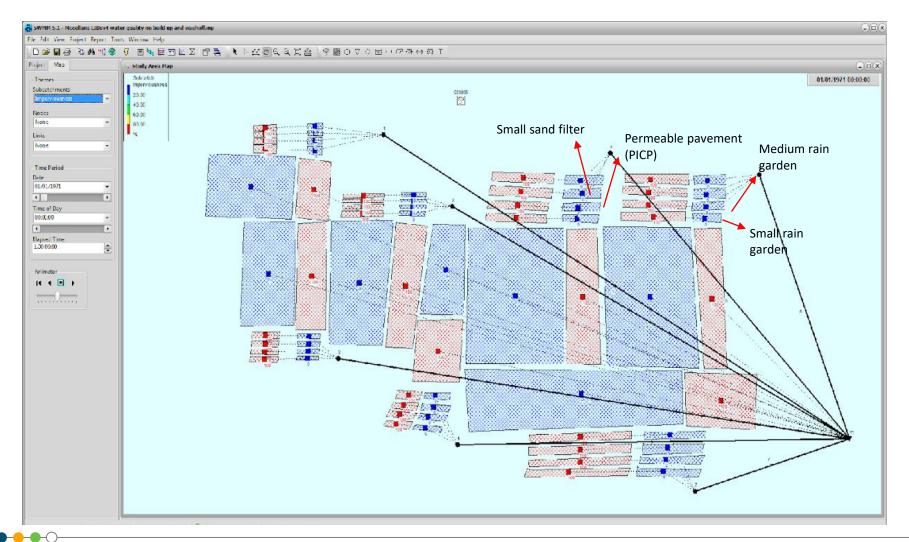

Rain Garden-00	(1 / 1)	Î	^
% Impervious Area Capt	tured		0
25		%	
Depth to Capture			0
0.5		Inch	

Stormwater technologies are then scaled based on:

- 1) Area desired to be captured
- 2) Rainfall depth or run-on ratio

Model developed in SWMM

Three Basic Outputs

Performance

Water Quality Runoff Volume Volume Infiltrated Volume Evapotranspired Number of runoff events

Lifecycle Cost

<u>Cost build up method</u> Construction cost Maintenance cost Rehabilitation cost Present value Average Annual Cost Over Design Life Per unit cost for scenario comparison

Co-Benefit Analysis

Score of economic, environmental, social elements based on: User selected importance factors Performance and cost output

Lifecycle Cost

Following NIST, 1996; USACE/EPA, 2000; USEPA, 2008

$$LCC = C_0 + \left[\sum_{t=1}^T M_t + \sum_{t=1}^T C_r\right]$$

- *LCC* = life cycle cost
- C_0 = initial construction costs
- M routing and pariodic maintanance casts

LCC Inputs, Assumptions

- Costs include regional adjustments
- Current dollar value includes "escalation" and/or "discount"
- Study period is user specified: 10, 20, 30, 50 years
- User adjusted discount rate 1 5%, default zero
- Rehabilitation value = portion of initial construction cost dependent on maintenance

Construction Cost Approach

- Line item build up for each technology
- Replacement cost calculated as a subset of initial construction line items counting salvage of select components
- Unit costs from DOT bid tabs
- Bid tab unit costs compared to RSMeans for validation
- Fixed combination of designs for each technology including small, medium and large sizes along with additional select parameters

Design Parameters Affecting Cost: Rain Gardens

Design Parameter	Small	Medium	Large
Surface Area (sq.ft)	100	1,000	10,000
Total Volume To Capture (cu.ft)	166	1656	16555
Ponding Depth (inches)	12	12	12
Filter Media Depth (inches)	18	18	18
Liner	Yes or No	Yes or No	Yes or No
Underdrain	Yes or No	Yes or No	Yes or No
Vegetation	Yes or No	Yes or No	Yes or No

Construction Cost Example: Rain Garden

Small Rain Garden (100 ft²)

Liner	Under- drain	Land- scaping	Initial Cost	Major Rehab Cost
		YES	\$7,693	\$2,741
	YES	YES	\$7,843	\$2,741
YES	YES	YES	\$7,974	\$2,741
			\$7,277	\$2,590
	YES		\$7,427	\$2,590
YES	YES		\$7,558	\$2,590

Large Rain Garden (10,000 ft²)

Liner	Under- drain	Land- scaping	Initial Cost	Major Rehab Cost
		YES	\$ 105,734	\$ 74,554
		YES	\$ 107,233	\$ 74,554
YES	YES	YES	\$ 115,915	\$ 74,554
			\$ 64,121	\$ 59,434
			\$ 65,621	\$ 59,434
YES	YES		\$ 74,302	\$ 59,434

Maintenance Cost Build Up: Rain Garden

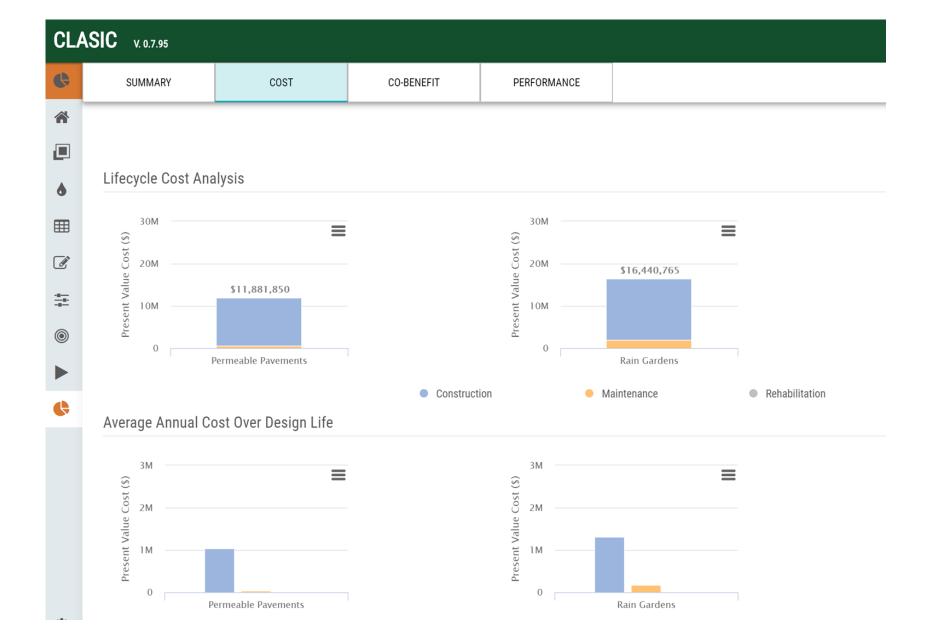

Vegetated

Activity	Units	Freq- uency	Hours per Unit	Labor Crew Size	Labor Rate/ hour	Overhead Factor (%)	Equip Cost/ hour	Other Costs / Unit	Total
Compliance Inspection	Each	1	1	1	\$23.21	100%	\$10.15		\$56.77
Spring/Fall Landscaping	MSF	2	2	2	\$23.21	100%	\$10.15		\$393.26
Spot Revegetation	MSF	0.33	1	2	\$23.21	100%	\$10.15	\$300.00	\$139.92
Trash/Debris Removal	MSF	8	0.33	1	\$23.21	100%	\$10.15		\$126.43

Base Cost: \$56.77/year

Size Related Cost: \$0.66/ft²/year

3 Basic Outputs

Performance

Water Quality Runoff Volume Volume Infiltrated Volume Evapotranspired Number of runoff events

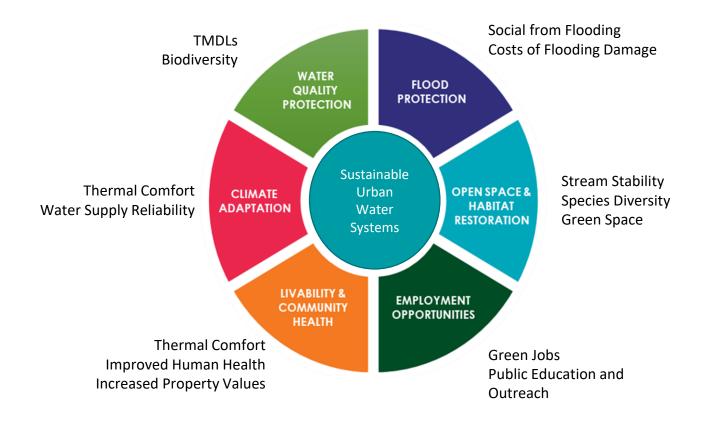

Lifecycle Cost

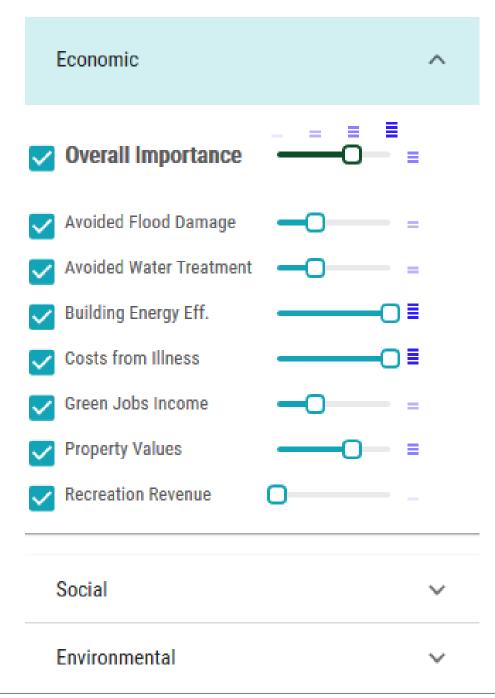

<u>Cost build up method</u> Construction cost Maintenance cost Salvage Value Net present value Average Annual Cost Over Design Life Per unit cost for scenario comparison

Co-Benefit Analysis

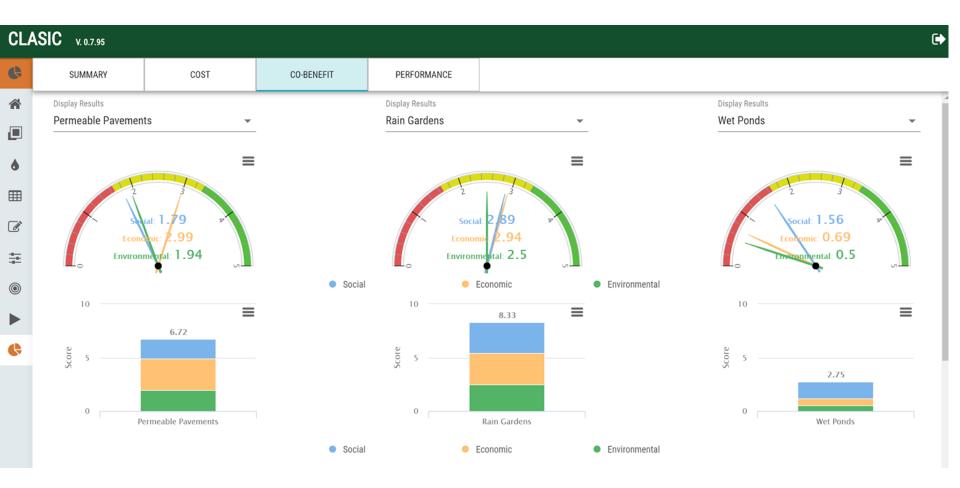

Score of economic, environmental, social elements based on: User selected importance factors Performance and cost output

Co-Benefits Analysis

Indicator	CLASIC Output	Min/Max
Economic		
Revenue from water recreation	Pollutant load (TSS, TN, TP)	Min
Property Values	Pollutant load (TSS, TN, TP)	Min
	Area of added green space	Max
Avoided costs for illness resulting from air quality improvements	Area of added green space	Max
Building energy efficiency	Area of green roofs	Max
Avoided costs for water treatment due to reduced municipal water demand	Volume water harvested used	Max

Schedule for CLASIC Release

- Beta Testing: Complete
- CLASIC tool refinement: September March 2020
- CLASIC tool final testing and case studies: March 2019 – May 2020
- Final refinement: June 2020
- CLASIC Tool Delivered: July 2020

Thank you!
